

Welcome to Today's Cloudera

Cloudera is the only data and AI platform company that brings AI to data anywhere: in clouds, data centers, and at the edge.

Cloudera delivers **100% of data** in all forms—whether in Cloudera or anywhere in the entire data estate. The world's largest organizations rely on Cloudera to fuel insights that boost bottom lines, safeguard against threats, and save lives.

Cloudera delivers a **consistent cloud experience** that converges public clouds, data centers, and the edge, leveraging a proven open-source foundation.

The future is driven by AI, and AI is fueled by all data

Organizations need access to 100% of their data, wherever it resides, to securely govern it and derive real-time and predictive insights without compromise.

We empower enterprises to bring AI to any data anywhere, so that they can reduce costs and risks, increase productivity, and accelerate business performance.

Our open data lakehouse enables secure data management and portable cloud-native data analytics, helping data-driven organizations to manage and analyze any and all data anywhere it resides.

With as much data under management as the hyperscalers (more than 25 exabytes), we're the preferred data partner for leading companies around the world in all major industries, specifically:

Agencies

As a result, organizations can address the full data lifecycle and eliminate data silos by running business intelligence (BI), artificial intelligence (AI), machine learning (ML), and streaming analytics on the same data without moving or locking in their data. With a write-once, run-anywhere approach, organizations can avoid refactoring time of apps and workloads with seamless portability and no integration costs.

Get the benefits of the cloud in your data centers

Cloudera delivers a consistent cloud experience, meaning we bring the best parts of the cloud—cost efficiency, scalability, elasticity, increased agility, reduced IT effort, faster access to innovation, and high availability—to wherever the data lives.

This gives enterprises the freedom to move data and AI workloads between clouds and data centers—without friction or vendor lock-in—so that you're no longer tied to any one piece of infrastructure, lowering business risk.

As a result, organizations can enjoy the benefits of the cloud in their data centers, with consistent operations and compliance no matter where data sits. With control and visibility over data, cost, and governance, key use cases are delivered faster and with a better return on investment.

A trusted, proven platform based on openness

We're pioneers in big data, bringing essential experience and a robust data lakehouse foundation to the nascent AI market. Cloudera has guided the world on the value and future of data and AI since our start. We now lead a vibrant ecosystem powered by the relentless innovation of the open-source community, with more than 200 committer and contributor seats on more than 30 projects.
